

# SET UP & PLAY INSTRUCTIONS

## 1. Connect the Pump to the Tower

Simply connect the pump hose to the Boom Tower inflation valve, using the larger of the connector's two holes. With the connector head in the *Open* position, press the connector head onto the valve stem as far as it will go, and lift the thumb lock lever to the *Locked* position.

(When finished playing, press the thumb lock lever back to the *Open* position and separate from the inflation valve.)

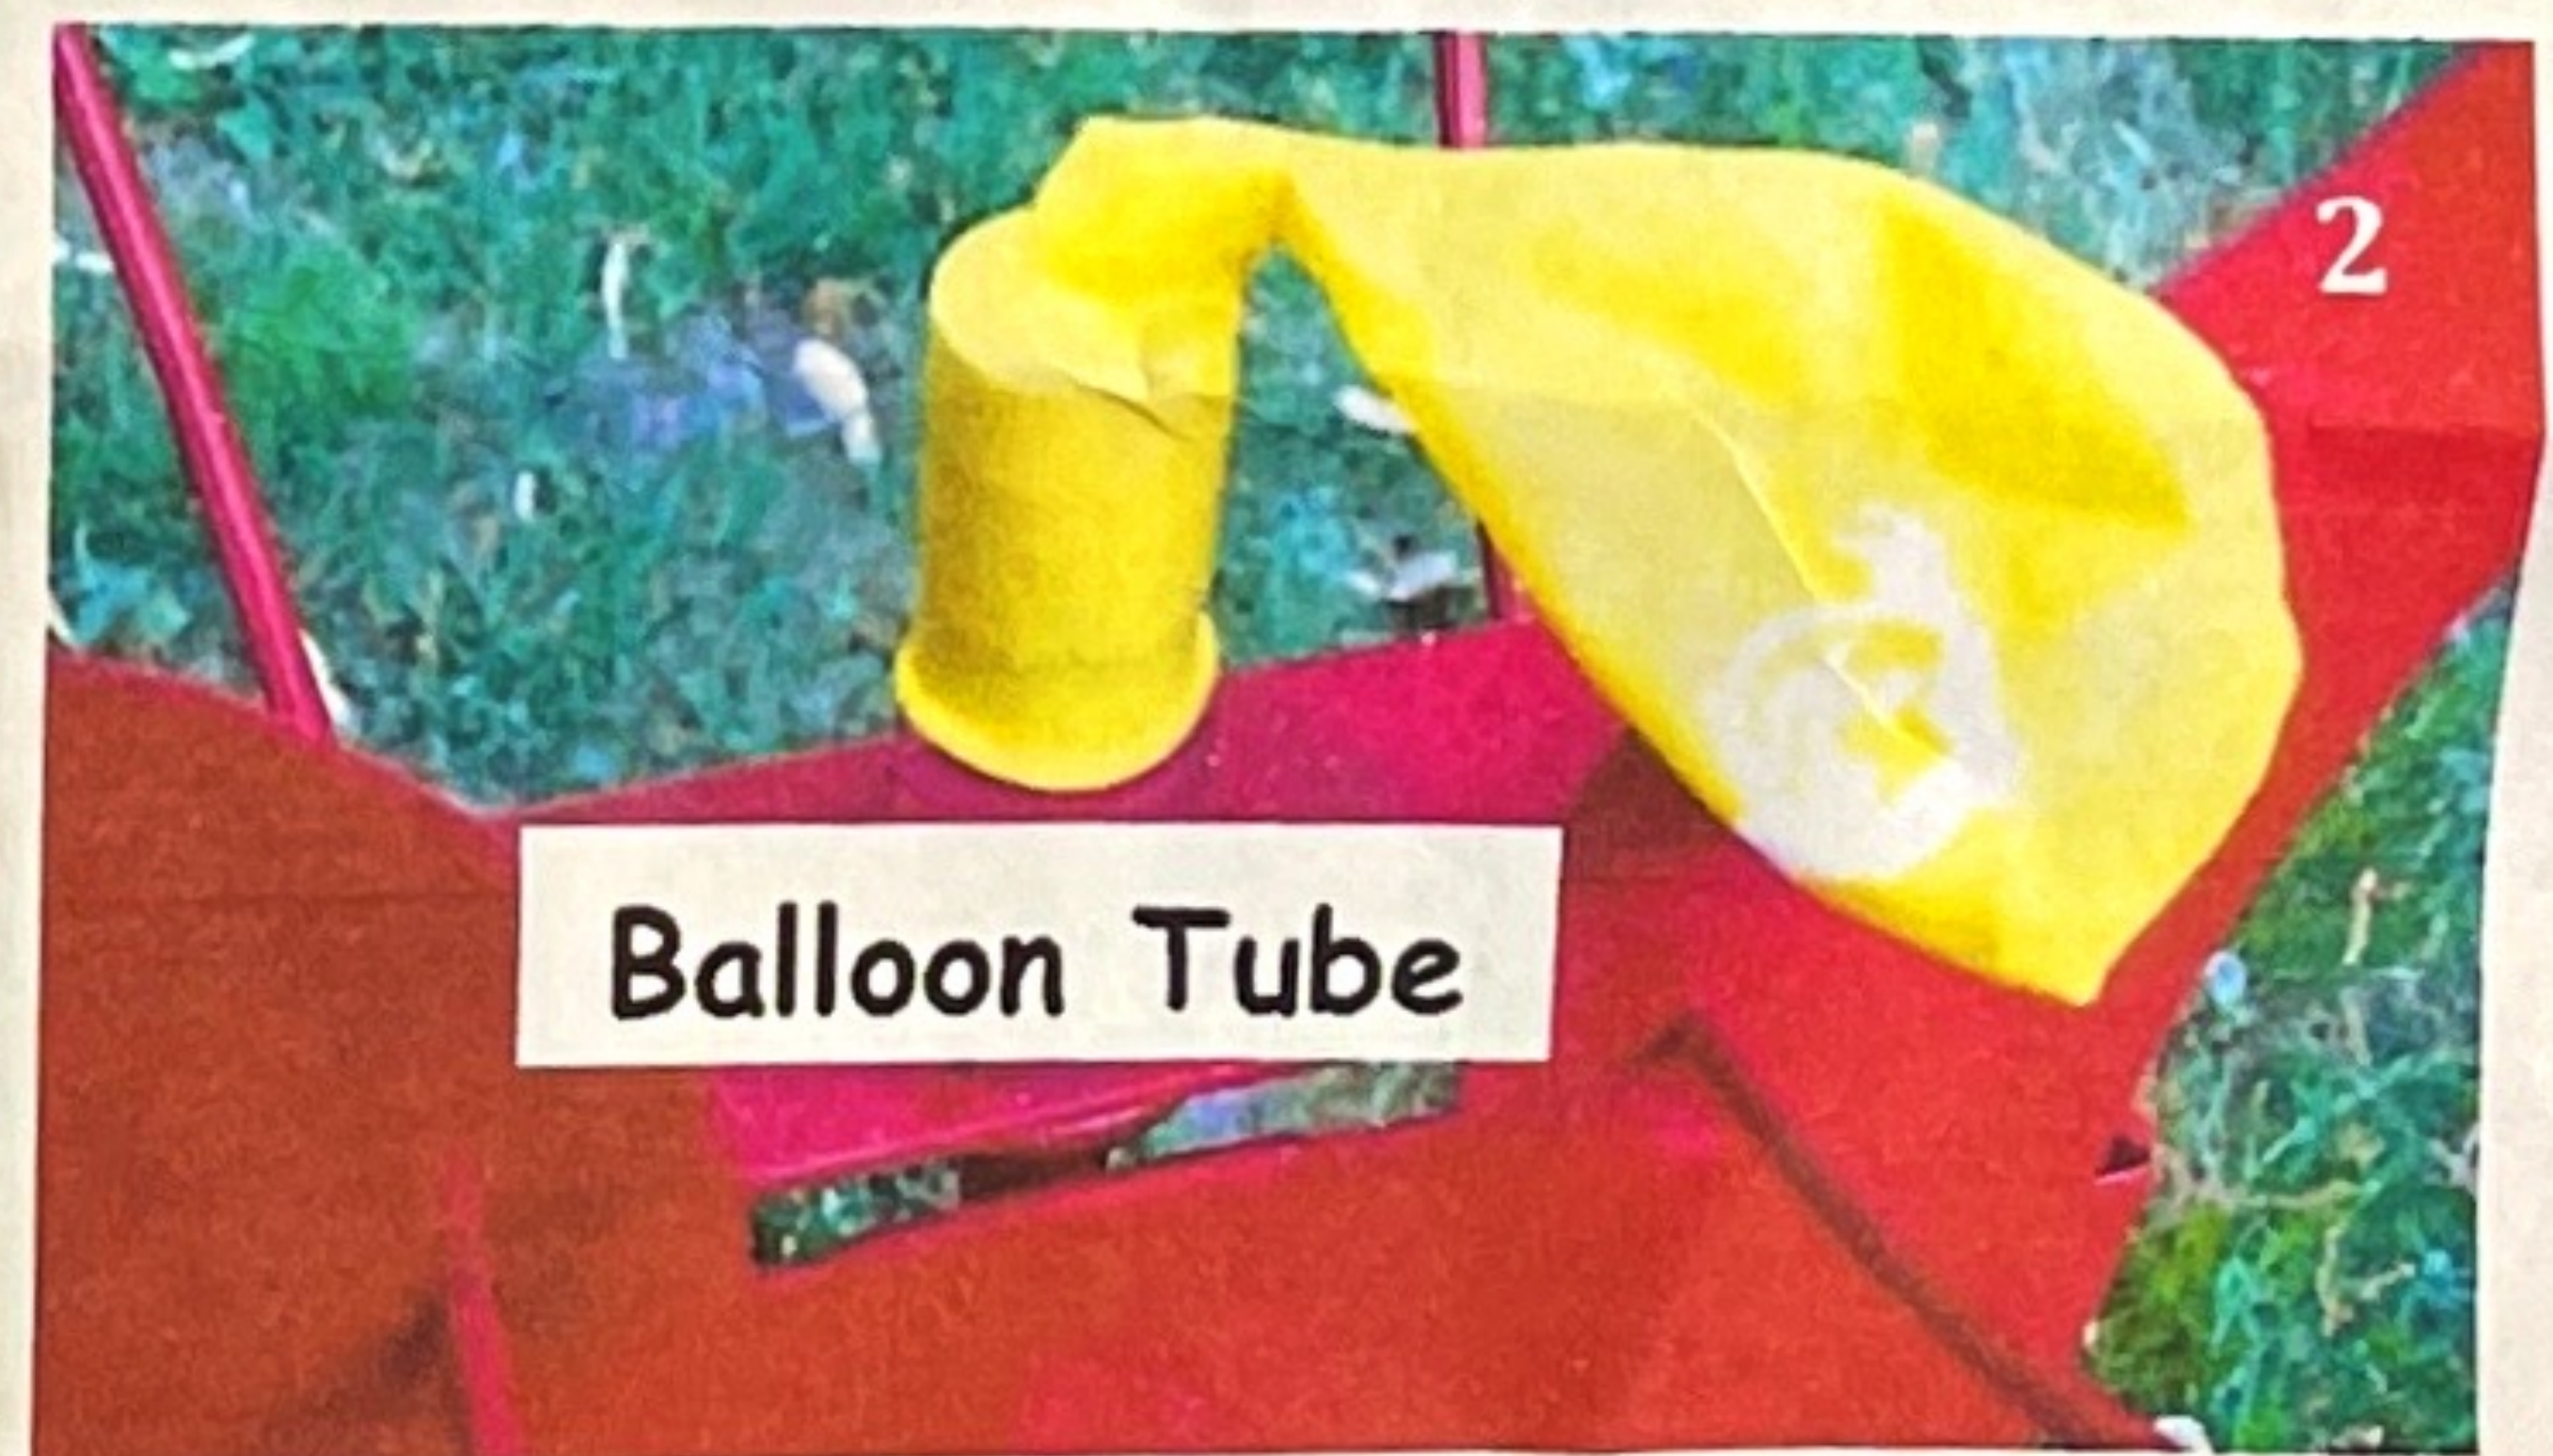

## 2. Attach Balloons

Using 11" or 12" round latex balloons, stretch the "neck" of the balloon and place it on the Boom Tower's balloon tube.

**IMPORTANT SAFETY NOTICE:** Children under 8 can suffocate from deflated or broken balloons. Adult supervision is required while playing with balloons. Keep deflated balloons away from children. Discard broken balloons at once.

*•In lieu of latex balloons, Boom Blaster can be played with non-latex medical gloves (e.g., nitrile gloves) as balloons. Use one 7/8" turn-key hose clamp (available from most hardware stores) on each game unit to secure the open end of the glove to the Boom Tower balloon tube.*

## 3. Pump and Have Fun!

Pump up and down on the Boom Detonator's handle to inflate your balloon. The faster you pump, the bigger your balloon gets, until it presses against the Balloon Bursting Arcs. Just a few more pumps and -- **BOOM!** The first to burst is the winner!
