Frozen Drink Machine Instructions

1. Fill both tanks with drink mix solution. When using the pre-made concentrate, use one half gallon bottle and add 2 gallons water for each tank.
 2. To operate, press main power switch and agitator switch to **ON** position.
 3. Temperature controls on the back adjust the density/consistency of the slush.
 4. For slush, press the cooler switches to bottom position (**II** / snowflake). For liquid, press cooler switches to up position (**I** / drops).
 5. If one side becomes more solid than the other, simply turn the switch for the corresponding side to liquid (**I** /drops, up position).
 6. To dispense drink, simply pull down gently on the handle. Push handle back up to stop flow.
 7. When finished using machine, empty all solution from tanks. Flush both tanks with warm water and drain to remove excess ice and sugar solution.
 - **DO NOT OPERATE ONLY ONE SIDE.** Both sides must be running simultaneously for proper freezing.
 - **DO NOT OPERATE WITHOUT COVERS IN PLACE.**
 - **DO NOT OPERATE WITH LIQUID BELOW MINIMUM LEVEL**
 - **DO NOT PLACE ANY FOREIGN OBJECTS INTO TANKS**
 - **DO NOT BLOCK VENTS.** Allow for proper air circulation on all sides of machine.
 - **DO NOT PUT ANY ALCOHOL INTO FREEZING TANKS.**
- Machine operates best when plugged in on its own breaker**
A 110 outlet is required to operate
